MF-13

Dear Customer,

Thank you for purchasing our *MagicFlavor Plug-Magnetizer*. It's been know for many years that the tastes of Wine, Spirit, and beverages can be altered by magnetic field. Base on this concept, we have developed our **Plug-Magnetizer** to improve both the tastes and structures of tastes of **Red Wine, Brandy** and **Whisky** with just one single **Plug-Magnetizer**.

How to use?

First insert the magnetizer onto the open bottle. Grasp the main body of the magnetizer and twist until the indicator aligns with the setting of your own choice.

There are eight adjustable settings you can choose from. Each setting will give you different structure of taste. For references please refer to the following Appendixes.

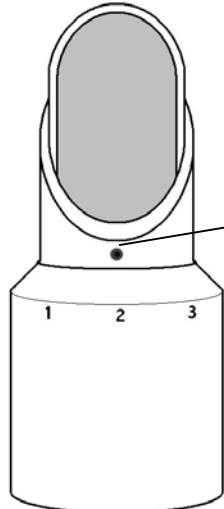

There is no Chemical Change after the treatment. Lab test results are shown on our website <http://www.magicflavor.com>. The Change is on its basic Physical state rather than Chemical. This change will last for about 15 days. After 15 days the taste will be restored back to the original.

We hope you can enjoy your drink with our **Plug-Magnetizer**.

If you have further question, please feel free to constant us at cs@magicflavor.com
